

Mall Management System

Introduction:- Our Mall Management System is like a smart helper for malls. It helps administrators, shop owners, and customers do things easily and have a better time in the mall.

Scope Of Project:- We made this system to make managing malls easier. It helps with renting spaces, tracking rent, managing parking, handling orders, and getting feedback. We also designed it to grow and change as malls do.

Modules Used in Project:

1. Admin Module:

- Admin Login: Log in safely.
- Tenant Management: Add and view tenants.
- Rent Control: Add and view rent details.
- Parking Overview: See parking details.
- Maintenance Tracking: Fix things faster.
- Feedback Analysis: Understand what customers say.
- Logout: Leave when done.

2. Shop Module:

- Shop Login: Shop owners log in.
- Product Management: Add and manage products.
- Billing and Invoicing: Make billing easy.
- Order Management: Handle customer orders.
- Order & pickup: Order items from stores and arrange for pickup,
- Admin Support: Report issues quickly.
- Logout: Leave the shop session.

3. Customer Module:

- Customer Login/sign up: new customer sign up & existing customer log in.
- Products: Browse and search for product
- Order: easy to order placed.
- Parking: Find parking without stress.
- Feedback: Share thoughts effortlessly.
- Logout: Leave when done.

Technology Used:

We built this system using simple tools:

- Language: C# (like the language the computer understands).
- Database: SQL Server (where we keep all the information).
- Data Tools: ADO.NET (helps us talk to the database).
- Special Instructions: Stored Procedures (makes things faster and safer).

These tools help the system work well, keeping information safe and making it easy for everyone in the mall.
